Lifetime Ceramic Coating Package (P/U Truck, 3 Row SUV, Minivan)	1	\$2,000.00	\$2,000.00
--	---	------------	------------

12+ years of real-world durability (maintenance and care dependent)

Here's a breakdown of the key steps in our top-tier ceramic coating prep process:

Decontamination & Cleaning

The process begins with a thorough Decontamination Wash to strip away all dirt, grime, and break down old waxes and sealants. Following this, a targeted Iron, Sap & Tar Removal process is used to eliminate embedded contaminants that a standard wash can't handle, such as industrial fallout and tree sap. The next step, a Clay Treatment, uses a synthetic clay mitt to physically pull any remaining bonded particles from the paint, leaving a slick, smooth surface.

The Special Touches

To ensure a flawless finish, we go beyond the basics. A Mineral Exfoliation step specifically targets and dissolves stubborn mineral deposits that can remain after the initial cleaning and decontamination. This is a crucial step for achieving a truly pristine surface.

Gloss Enhancement Polishing (1-step)

The most labor-intensive part is the Gloss Enhancement Polish. This 1-step process removes up to 50% of swirls and light scratches, restoring a deep, reflective shine. This step is what makes the paint "pop" before the coating is applied.

Final Prep

Finally, while many shops only use a panel wipe, we utilize an Adhesion Promoter Polish. This specialized product deep-cleans the surface, removing polishing oils and creating a better foundation for the ceramic coating to bond. It helps ensure maximum coating performance and durability.

Coating Application

We apply a Pro-only, lifetime coating to the paint, trim, headlights, and taillights of the vehicle.

Estimated duration: 14 hours

Misc. ceramic coating service	1	\$450.00	\$450.00
-------------------------------	---	----------	----------

Road paint on the right front body area. Remove paint from the right front fender, mirror, door, and running board. Recommend replacing the right front fender trim, lower door trim, and tire.

2-Step Correction Add-On Ceramic Coating Packages (P/U Truck, 3 Row SUV, Minivan)	1	\$400.00	\$400.00
---	---	----------	----------

2-step paint correction is a professional detailing process used to improve or remove moderate to heavy paint defects. It utilizes two separate stages to restore your vehicle's finish to a nearly perfect, showroom-quality

condition.

How the 2-Step Process Works

Step 1: Compounding (The add-on service): An aggressive "cutting" compound is used with a microfiber or wool pad to level out the clear coat. This removes deep swirl marks, scratches, and oxidation, but often leaves a slight haze on the surface.

Step 2: Polishing (Included standard with all coating packages): A fine polish and soft foam pad refine the surface. This step removes the haze from the first stage, creating incredible depth, clarity, and a mirror-like shine.

1-Step vs. 2-Step Comparison

The main difference is the level of perfection you want to achieve. A 1-step process uses a single polish to enhance gloss, while a 2-step system aims for more defect removal.

Recommendation

Choose a 1-step correction if your car is a daily driver with light wash marks and you want a significant boost in shine.

Choose a 2-step correction if the paint has deep scratches and heavy swirls. Or for vehicles with harder clear coats. (most modern German vehicle)

Con's!!

This service can not be performed multiple times! The clear coat is very thin and is what ultimately protects the color and surface underneath. Removing defects from the clear coat removes the clear coat itself! Remove too much, and you risk premature failure! We use safe and effective tools, products, and procedures, while removing as little clear coat as possible .

Estimated duration: 6 hours

Subtotal	\$2,850.00
Tax (0%)	+ \$0.00
Total	\$2,850.00
